The Pempek OBP Mining PLC I.S. I/O Module provides intrinsically-safe (Group I Ex ib) input and output resources in a single, compact unit.

A unique fibre-optic communications interface means that the module and dedicated I.S power supply, can be conveniently segregated into it's own isolated zone.

The fibre-optic link between the module and an Pempek OBP processor module provides real-time control and monitoring of all I/O points.

This solution is ideal for mobile mining equipment where limited installation space must be managed.

Uniquely Keyed Type Connectors to prevent incorrect machine installation.

The module is Dual Pempek OBP Type which complies with AS/NZS 4240 standard.

As per standard every output includes two switches A&B in series with monitoring feedbacks from both.

Extra safety is achieved by using two potted boards where each includes main and watchdog processors monitoring correctness of executed main software code.

Module Primary board - B18\_B0L32 Module Secondary board - B19 B20 B0MWJ

## **Display Diagnostics**

The integral 4 character LED Matrix display provides the end user with some basic diagnostics as to the operation of the module. These messages are as follows:

ON - No Faults FEBK - Outputs Feedback Fault SHRT - Output Short Fault CAN - Fibre-optic CAN Bus Fault

## **Message Explanation Result**

## ON

Omni Flashing Indicates nominal operation and signifies that CAN communications has been established with a host. Normal Operation Permitted

## CAN

Indicates CAN Communication has not been established or has been lost. Outputs Disabled

## FEBK

Indicates that internal are NOT congruent with requested outputs. This typically occurs when an output has been requested but has failed to operate indicating a supply failure or wiring error. Outputs Disabled

#### SHRT

Indicates that a short-circuit condition has been detected a requested output. This short-circuit could be external (most probable) or internal
