

## L0MZ0101 Pempek OBP Proportional Solenoid Ex ib Intrinsically Safe I/O Analog Inputs 12 Bit

The Pempek OBP Mining PLC I.S. I/O Module provides intrinsically safe (Group I Ex ib) input and output resources in a single, compact unit.

A unique fibre-optic communications interface means that the module and dedicated I.S power supply can be conveniently segregated into its isolated zone.

The fibre-optic link between the module and an Pempek OBP processor module provides real-time control and monitoring of all I/O points.

This solution is ideal for mobile mining equipment where limited installation space must be managed.

Uniquely Keyed Type Connectors to prevent incorrect machine installation.

**The module is Dual Pempek OBP Type which complies with AS/NZS 4240 standard.**

**As per standard, every output includes two switches A&B in series with monitoring feedbacks from both.**

**Extra safety is achieved by using two potted boards where each includes main and watchdog processors monitoring the correctness of executed main software code.**

**Module Primary board - A21\_B0L3P  
Module Secondary board - A22\_B0MZG**

Mounting options can vary depending on customer requirements.

**Display Diagnostics**

The integral 4 characters LED Matrix display provides the end-user with some basic diagnostics as to the operation of the module. These messages are as follows:

**Message Explanation Result**

**ON**

Omni Flashing Indicates nominal operation and signifies that CAN communications have been established with a host. Normal Operation Permitted

**CAN**

This indicates CAN Communication has not been established or has been lost. Outputs Disabled

**FEBK**

This indicates that internal is NOT congruent with requested outputs. This typically occurs when output has been requested but has failed to operate indicating a supply failure or wiring error. Outputs Disabled

**SHRT**

This indicates that a short-circuit condition has been detected as a requested output. This short-circuit could be external (most probable) or internal Outputs Disabled

**OPEN**

This indicates that the requested output is not drawing sufficient current to operate as expected indicating that the solenoid coil is an open circuit. Outputs Disabled

**LOAD**

This indicates that the requested output is not drawing current as requested when commanded to operate proportionally. Outputs Disable
